bose 301 speakers manual

To prevent warranty infractions, WARRANTY The Bose Model 301 Series V loudspeaker is covered by a fiveyear limited warranty. The 301 Series V is designed for use with standard amplifiers, receivers, and other related home audio components. General Test Set Up 3.3 Reduce the input voltage to 3 Vrms, and Connect the output of a signal generator to continue sweeping from 5 kHz to 15 kHz. The Series 2 had 2 Tweeters and no adjustable baffle. The others Series had different designs and enclosures and are easier to identify. You can download the service manual from this site. Mine are the original 301s. dont think the newer models are a whole lot different. This is sleeper in the Bose line. The right size for a book self speaker. It is speaker that uses direct and reflection of sound off the wall so speaker placement is critical. I myself use them in a small den on speaker stands so volume levels are not too high they could go much higher if one was so inclined. 3 tweeters with an 8 inch woofer is just about right in a small to mid size room. They compare quite favorably to my Snell Ks which are in another room. Should you find any errors, please help us by reporting it here. Proprietary technologies built into these bookshelf speakers let you enjoy balanced stereo sound almost anywhere in the room, not just in one "sweet spot". Woofer and port geometry complement each other so you can enjoy cleaner and deeper performance in the lower frequencies, particularly at high volumes. Enjoy a balance of reflected and direct sound for a spacious, natural experience much like a live performance. Use these speakers for music, or film sound—they can be used as main, secondary or surround home cinema speakers. Went to a apartment that belonged to the sister of a friend of mine. We were just hanging out and she turned on some music. The sound i heard coming from those 301s was unlike any i had heard. It was then I knew I had to have that sound and although I still havent purchased a pair Ive put together a couple of nice stereo systems that have satisfied my music fix. I think Ill order a pair just to relive that experience so many years ago. Cheers and enjoy the music, bring back the memories Great base, solid units and look just a good. I also purchased the stands and that enhanced the beauty and sound quality because of the reflective variance vs sitting flush against a back wall or bookshelf. The open, spacious performance of these speakers makes them an ideal choice for home theater, or for listening to CDs, tapes, or radio broadcasts. You experience the power, impact and emotion of a concert hall performance in your own home. Flared Slot Port Design Enjoying leaner and deeper performance in the lower notes, particularly at high volumes with the specially engineered design where woofer and port geometry complement each other to reduce air turbulence. Jacob Monhollen 5.0 out of 5 stars I'm going to review the speakers and how they sound in the room and for the setup that I wanted. I liked the way these looked on the Bose speaker stands and how it fit the room or the concept that I wanted speakers for in the first place. My biggest fear is that I wouldn't be happy with the sound vs. I wanted to build a 2.1 channel system for the room with my pool table. Watched all of the YouTube videos, read all of the reviews. The first place I go on reviews

is the lowest ratings. Why did people not like these speakers. Damage during shipping, faulty products and anyone that manufactures will have lemons, and then there were people that just hate Bose and said something else was better. I wish those types of reviews would stop. I would never submit a bad review because UPS sucks. I just don't hold this against the product. I bought these eyes wide open, and ready to return them if I wasn't satisfied. So. How'd they do They sound great. Super happy. They sound bigger than they are. They don't blast your face off, they just sound good regardless of volume. Speaking of volume they get loud. One of the points that I gleaned out of the reviews is that they aren't as efficient as some other speakers and that others have found that more power wakes them up. I paired them with a Harman Kardon 3770. That receiver advertises 120W x 2, and has a dedicated LFE output. Hooked that up and was super happy. Don't know what the db ratings are, but it SOUNDED GOOD. Cranked it up louder than I need and these relatively little speakers sounded loud and clear. Haven't got them to distort yet. Good details. Just sound big. I have no interest in looking at other speakers anymore. I'm that happy.

Good bass for the size, and if you listen to them long enough without a sub you may very well talk yourself out of one, but. I wanted more. I added a Velodyne Impact 12 MK2. Newer model not available on Amazon when this was typed Done. It MAJORLY picks up the low end that speakers this size, or floor standers with 68" low ends lack. I would highly recommend these to those who are looking for great sound in a compact package. If you want a nice 2.1, pair them with a decently powered receiver and a sub. They sound great on their own. The sub just fills in another level at the volume that these put out. These are not face melters. They are room fillers. I've returned more than a few Bose products over the years. Not a Bose fanboy. I will never return these, and for the game room that I wanted to add a classic 2 channel 2.1 I am super happy with these. I would highly recommend the Bose stands. Just looks good. One other common knock on these is that the quality of construction and components is inferior to the competition. Looking at them I would agree. Paper cone subwoofers in 2018. However they just sound good with the power I'm pushing. In the end, I was teetering between Polk Tsi500's or Klipsch RP280f's. Those speakers are undoubtedly better than these. But for the size, sound reproduction, and money, I'll never think I should have tried the others. I'm really that happy, and I realize that these are perfect for the space that I put them in. After upgrading other components of our family room sound system, I looked into the Bose 301s. I had a pair of old Bose 301s that I still liked. About 35 years old one must assume technology has advanced since then. On Amazon read reviews of these new 301s by other buyers. At least three people had the same situation, namely, an old pair of 301s but upgraded. They were very pleased with the new Bose offering. Based partially on those reviews, I bought them and I am extremely pleased with the results.

Perhaps the brighter sound is the result of adding a second tweeter. I chose Bose originally for voice quality and the new 301s retain that. I also have a pair of Bose 901s on a different system which I consider the best speakers ever made, also chosen for their voice quality and ambience. My system consists of a new Onkyo stereo 2 channel amp, the 301s, and a Yamaha powered subwoofer. They are fed from the cable box and a bluray DVD player, all hooked up via HDMI connections. No more RCA cables! I have discovered one can have very nice sound from two bookshelf speakers and a subwoofer. The subwoofer is optional of course, but crossing over the 301s into the woofer at 80 Hz does extend the bass effects. One word of advice. Bose speakers need air around them. It is part of their design to achieve their ambient and spacious sound. Be sure to follow the instructions as to the clearance dimensions required around them for their placement. They produce a very natural sound that literally wraps around you if properly placed. It was just unbelievable. As the decades past I saw them increase in quality. But I knew the price was out of reach. I saw these and said Im not getting any younger. Any who I received them the 12th. Already had wires and spot all set. Hooked them up listen to some led zep, aja steely dan, Chris Isaac, some lynryd. All I could do is sit there and listen and laugh they are still the best. Absolutely positively the best still. This is for the people of Amazon.

Like I said you made it possible for an old hippie of 63 able to spend the rest of his days listening with his dream full field. Thanks again. Welcome back its day 4. Ive been going thru my 4500 plus library hearing all for the first time. Have them meticulously placed and still just sitting here enjoying and laughing cant help it. To be continued. How is everyone happy thanksgiving. Its been 2 weeks. Im listening to l a woman again for the first time.

Well be safe all and Amazon and Bose thanks again later. Well its been a month and right now Im on a Night Flight with Jimmy Page so rock on ttfn darlings ttfn. Was concerned the Bose speakers wouldnt be big enough to handle the sound I wanted. There was no need to worry. I would go deaf before these speakers ever reached their peak. Attractive, not too big so they dont take over the room. These speakers over deliver. Vinyl, digital, streaming. Everything sounds fantastic through them. Big sound. Perfect resonance. I just cant say enough about these speakers through my old Rotel amplifier. So this was special. Opening the box my heart was racing. They certainly are typical Bose. A quality product. Played some Fairport Convention for the first time and am blown away by sounds not heard before. These speakers are easy to set up. Read owners Manuel for correct positioning of them. I am extremely happy with my purchase. Only time will tell if they last the 2530 years I had the mordant shorts. Sorry, we failed to record your vote. Please try again However, like some other Bose products, looks can be deceiving. Vocals with two tweeters positioned front and rear are impressive and bass is quite balanced experiment with positioning midrange is ok. Im using a hybrid valve amp and it seems to work well in a medium size room. The reason I bought these speakers is that they have a wide stereo image thats room filling and easy listening. They are not high end, but are different in looks and sound to other budget speakers. Its just a shame that the finish on them is not better. Sorry, we failed to record your vote. Please try again They are also very efficient and a 100w of power to each speaker sounds more like 500w, they are small but shue pack a punch. Sorry, we failed to record your vote. Please try again My prime purpose to play these through my Mac into an amp. Does the job. But will buy a better more sturdy amp. Doesnt come with cables and has little rubber feet included.

Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Looking forward to installing them as they should be later in the week when the brackets have arrived. These will add to my existing Bose speakers and acoustimass system and will just fill the room with sound. Cant wait until its all up and running. Sorry, we failed to record your vote. Please try again Fills the room with clear and fullrange music. Sorry, we failed to record your vote. Please try again Tal vez porque ya tenia otros altavoces Bose en casa desde hace anos y tengo el oido hecho a su particular sonido. Muchos dicen que no es autentico HiFi, que si les falta esto y les sobra esto otro. Yo personalmente estoy muy satisfecho con ellos. Son unos bafles muy compactos para disfrutar de la musica sin complicaciones. Reparten muy bien el sonido por la habitacion no tenemos que sentarnos en el centro para notar un buen estereo, suenan muy bien con volumen bajo y si quieres darle cana se comportan de maravilla. Graves con pegada, agudos finos. Sorry, we failed to record your vote. Please try again Che altro dire Consigliatissime! Sorry, we failed to record your vote. Please try again Non volendo comprare un impianto sorround completo Bose avevo optato per questi altoparlanti passivi da collegare al mio impianto amplificatore Kenwood di media categoria collegato a TV e Spotify piu giradischi Thorens, ma sono rimasto un po deluso i bassi sono profondi e vero, ma impastati col resto delle frequenze. Per ascolto musica, li ho confrontati con delle Indiana Line dj308 che costano molto meno, e queste ultime hanno una qualita ed una potenza una spanna sopra. Magari mi sbaglio, ma per valorizzarle forse necessitano di amplificatore Bose anchesso o di un equalizzatore per gestire le frequenze non mi sorprenderei se in questo caso risultassero anche migliori delle indiana, che peraltro sono molto piu grosse.

Inoltre la forma svasata sara funzionale, pero non mi piace, preferisco un aspetto piu neutro. Sorry, we failed to record your vote. Please try again Pensavo che Bose avesse una cura dei dettagli o devo

desumere che mi è stato più volte spedito un prodotto ricondizionato. La funzionalità non è compromessa ed alla fine ho deciso di tenerlo, ma non sono soddisfatto. Amazon's sale also includes the single component Bose Solo 5 TV Sound System with a universal remote control. The Bose 301Vs use reflected sound with front and rearfiring tweeters for higher frequencies, an effect that fills the room with balanced stereo. Bose's Solo 5 TV System is an entry-level sound bar that improves on TV audio, with a specific dialogue mode that helps viewers understand what characters are saying. Bose's Stereo Targeting uses two 2-inch frontfiring tweeters and one 2-inch rearfiring tweeter on each speaker. Because

higher frequency sounds are more directional than bass sounds, the rearfiring tweeter audio is designed to reflect off whatever is behind the speaker, changing the dynamics of sound localization so your ear doesn't isolate the music to a single location. The speaker's long excursion 8inch woofer and the 301's flared slot port have the effect of cleaning the base for powerful, clear low notes and sounds. When placed on a bookshelf or entertainment center, you don't need to be too careful about centering the audio output in the room because the reflective technology means the speakers don't create listening sweet spots. Bose calls this tech Stereo Everywhere. If you want a sweetsounding set of bookshelf units to fill any space in your home with balanced audio, this is a great opportunity to take advantage of this awesome price. It only requires one audio cable optical, coaxial, or analog to connect the Solo 5 to your television.

You can also connect via Bluetooth to your smartphone or tablet for wireless music streaming. The included universal remote control controls the Solo 5 including Bluetooth connections and can work with other video sources connected to your TV. If you're shopping for a relatively lowcost soundbar that will improve your TV sound and clear up the audio for your primary or a second television, this deal presents solid savings. By Bose 8 years ago Helpful 6 Unhelpful 1 Report Sorry, there was a problem. Show more answers Question Q Power and Impedence I have an onkyo HTS8400 home theater system with a 5.1 setup instead of a full 7.1 that its capable of. The receiver has a 130watt per channel output with 616 ohm impedence. I want to replace the original onkyo speakers with new Bose component speakers.

I will keep the onkyo subwoofer own power supply and the onkyo center channel no bose alternative. BTW the original onkyo speakers were all 6 ohm and 130 watts. My main concern is that the 161 and 301 Bose speakers have a 48 ohm rating, does this mean that these speakers will sometimes demand 4 ohms or will they work with the 616ohm receiver. Do I run the risk of frying my receiver. The other concern is that the the 161 has a 10100 watts while the receiver throws 130, can this damage the speakers at high volume. The 301 has 150 watts but the receiver again is only 130watts, does this means I cant use the 301 to their full potential. I am thinking these values are RMS anyway but it doesnt hurt to ask. Also I run 12 gauge wire for all my speakers since wires are 2030 feet, but I dont think this will fit into the 161 or 301 speaker rear ports. Please let me know if these bose speakers will be a safe purchase with this receiver. My others worry is that since the 301s are reflexcing speakers with a purpose to fill the room with stereo sound, will this be detrimental to a HT setup as it will make the sound ubiquitous rather than seem as if the sound is coming from the right or the left respective to the onscreen performance One has to place the 301s at least a foot off the wall perpendicular to them to allow the reflexing technology to work, but what is the best distance. I think I will have to measure the trajectory of the 301 rear speaker sound wave based on the principle angle of incidence is equal to angle reflection and trace the wave to see where is lands on the listening area. Also, the bose floor stands for the 301, will they hide the 12 gauge wire in the shaft. In addition, will the floor stands, with a fixed height of 2 feet, be high enough for optimal listening Our sofas place our ears at approx 3036 inches. Also, what angle below the horizontal

should I lower the 161 to face the listening area Thank you for your time and expertise.

Singh 2 Answers By Singh 8 years ago Helpful 0 Unhelpful 0 Report Sorry, there was a problem.
Answer this question Answers Best answer Hi Singh. The impedance specifications of the 161 and 301 speakers refers only to their compatibility with a receiver. Since the Onkyo is compatible with any speakers rated between 6 and 16 ohms, you will not run into any problems. You are correct in your statement that the receiver is putting out 130 watts RMS. Since the 161 speakers are being used as surround speakers, they will not be playing all the time and not at an extremely high volume level. We don't see any issues with the setup there, either. Regarding the wattage rating of the 301 speakers, the difference between 130 and 150 watts is extremely negligible. We doubt you'd be able to hear a difference at all. Signal loss is not a concern in this situation, so dropping down to a 16 or 18 gauge wire would be our recommendation, since you may have difficulty connecting a wire of that thickness to the speakers. Although the 301 speakers use our Direct Reflecting technology, this will not impact their quality in a home theater set up whatsoever. The receiver handles the duty of directing sound to the proper speaker positions so therefore the surround sound effect will be preserved. In reference to the floor stands and wire thickness, our suggestion would be to change your wire gauge to something smaller. Due to internal design of the 301's, the 24 inch height of the floor stands should be sufficient for your listening position. The height of the ceiling in your room should dictate how high to mount the 161 speakers, but the general rule of thumb is about 18 to 24 inches above ear level. At this height, a slight downward angle of 15 to 25 degrees would be acceptable for the rear speakers in your setup. We hope this information is helpful for you.
